

EXPLANATION SHEET

IGS ENHANCED VIBRACORE

3 March 2021

IGS's vibracore system is not the biggest or fastest available.

However, it provides very high recovery %, and samples are taken with nil or close-to-nil contact with air.

Samples are ejected into 600mm long plastic bags.

This sampler can be used with any of our rigs, but it is particularly suited to "Minnie", "Mudskipper", "Mad Mack" and the "Punt Rig".

Vibracore tube lengths of 1.8m and 3m are available, and in very soft materials depths can sometimes be doubled up because of the closed piston shown in Step (1) above; ie using the 3m tube 6m sampling can be achievable.
